

Rev-It®

PN E101-2110

Reving the engine is required during most induction services. It's what propels the product across all cylinders. Without frequent, consistent engine revving, there's a risk of hydro-locking the engine during a service.

The new BG Rev-It®, PN E101-2110, revs the engine automatically so techs are free to safely perform other services while the service is running.

- **Easy to use**
- **Ensures service efficiency**
- **Improves shop productivity**

The BG Rev-It® ensures optimum cleaning ability of all BG induction services, including the BG Platinum® Fuel System Service. Take the labor out of labor hour with the new BG Rev-It®!
